

ACCESS PLAN

LINCOLN COUNTY HIGHWAY 106 (271ST STREET) CORRIDOR STUDY

CORRIDOR ACCESS CATEGORY GUIDANCE: City of Sioux Falls Arterial III

Access Spacing:

- Full movement access: 1/4 mile
- Signal spacing: 1/4 mile
- Median opening: 660 feet
- Unsignalized intersection spacing: varies

Additional access or other types of movements may be evaluated through a traffic analysis for consideration by agencies with jurisdiction of the applicable roadway segment.

Management of Existing Access:

Prioritized access management treatments for existing and future access points:

1. Close access and connect to 1/4-mile intersection via frontage, rearage, or development road
2. Relocate access outside of major intersection functional area
3. Construct median and restrict access to right-in right-out
4. Consolidate access points

Access management is recommended to occur through future development, redevelopment to a higher land use, and transportation projects.
